

MODULE NAME:	MODULE CODE:
COMPUTER NETWORKS 1A	CONE5111/p/w
NETWORK ENGINEERING 1A	NWEG5111

ASSESSMENT TYPE: ASSIGNMENT 1 (PAPER AND MARKING RUBRICS)

TOTAL MARK ALLOCATION: 100 MARKS

TOTAL HOURS: 10 HOURS

By submitting this assignment, you acknowledge that you have read and understood all the rules as per the terms in the registration contract, in particular the assignment and assessment rules in The IIE Assessment Strategy and Policy (IIE009), the intellectual integrity and plagiarism rules in the Intellectual Integrity and Property Rights Policy (IIE023), as well as any rules and regulations published in the student portal.

INSTRUCTIONS:

1. ***No material may be copied from original sources, even if referenced correctly, unless it is a direct quote indicated with quotation marks. No more than 10% of the assignment may consist of direct quotes.***
2. ***Save a copy of your assignment before submitting it.***
3. ***Assignments must be typed unless otherwise specified.***
4. ***All work must be adequately and correctly referenced.***
5. ***This is an individual assignment.***

Referencing Rubric

Providing evidence based on valid and referenced academic sources is a fundamental educational principle and the cornerstone of high-quality academic work. Part of achieving this quality is referencing in a way that is consistent and congruent with the requirements of the referencing style being used.

Therefore, inconsistent and/or incongruent referencing will result in a penalty of **a maximum of ten percent being deducted from the overall percentage** awarded to your assessment submission.

Please note that **evidence of plagiarism** in the form of copied or unreferenced work, absent reference lists, or exceptionally poor referencing **may result in action being taken in accordance with The IIE's Intellectual Integrity and Property Rights Policy (IIE023)**. Similarly, **evidence of excessive AI usage may result in action being taken in accordance with The IIE's Student Conduct, Discipline and Safety Policy (IIE015)**.

Markers are required to provide feedback to students by **circling/underlining the information in the table below that best describes the student's work and by adding constructive commentary where appropriate**. The examples provided are not exhaustive but illustrate the errors.

Deductions

- Where the student's work contains **five or more errors** aligned to the **minor errors column** below, **deduct 5% from the overall percentage**.
- Where the student's work contains **five or more errors** aligned to the **major errors column** below, **deduct 10% from the overall percentage**.
- Where both minor and major errors** (e.g. two minor and three major, etc.) are present, **deduct 10% only** (and not 5% or 15%) from the overall percentage.

Required: Consistent and congruent referencing	Minor errors Deduct 5% from overall percentage. Example: if the response receives 70%, deduct 5%. The final mark is 65%.	Major errors Deduct 10% from the overall percentage. Example: if the response receives 70%, deduct 10%. The final mark is 60%.
Consistency - The correct referencing style for the discipline – i.e., either Harvard, OR APA (for Psychology), OR Law, OR IEEE (for ICT/Engineering) – has been used consistently for all in-text references and in the bibliography/reference list. Concepts and ideas that are quoted and/or paraphrased are referenced consistently throughout. Position of the in-text reference: an in-text reference is positioned consistently where appropriate for every quote and paraphrase.	Minor inconsistencies: - The referencing style used is generally consistent with what is required, but there are one or two changes/errors in the format of in-text referencing and/or in the bibliography/reference list. - For example, page numbers for direct quotes in-text have been provided for one source, but not in another. Or, two book chapters in the bibliography/reference list have been referenced in two different formats. Or, the publication year has been placed after the author name in one bibliography/reference list entry, and after the source title in another, etc. - Concepts and ideas in quotes and/or paraphrases are typically referenced, but a full in-text reference is missing or incomplete from one or two small sections of the work. - Position of the references: in-text references are only given at the beginning and/or end of every paragraph.	Major inconsistencies: - Poor and wholly inconsistent referencing style used in-text and/or in the bibliography/reference list. - Multiple referencing styles for the same source types have been used. - For example, the format for direct quotes in-text and/or book chapters in the bibliography/reference list and/or year of publication in the bibliography/reference list is different across multiple instances. - Concepts and ideas in quotes and/or paraphrases are haphazardly referenced in-text. - Position of the references: in-text references are only given at the beginning or end of large sections of work.
Feedback on referencing consistency:		
Congruency Each source reflected within in-text references is included accurately in the bibliography/reference list. - All bibliography/reference list entries are in the required order for the referencing style used (e.g. alphabetical, alphabetical under subheadings, numerical). - All direct quotes and paraphrases have been integrated appropriately into the text using introductory phrases, accurate grammar, etc.	Minor incongruities: - There is largely a match between the sources presented in-text and those in the bibliography/reference list, but one or two sources that appear in-text do not appear in the bibliography/reference list, or vice versa. Or key source information is missing from one or two in-text references or bibliography/reference list entries only (e.g. publication year, city of publication, URL date accessed, etc.). - There is a clear and largely accurate ordering of sources in the bibliography/reference list as required by the referencing style used, but with one or two references out of order. - An attempt has been made for source integration into the text using appropriate introductory phrases and grammar, but one or two quotes or paraphrases do not flow as clearly or logically within the sentence structure as they could.	Major incongruities: - No relationship/several incongruities between the in-text referencing and the bibliography/reference list. - For example, multiple sources are included in-text, but not in the bibliography, and/or vice versa. Key source information is missing from multiple in-text references and/or reference list entries. A URL link, rather than the actual reference, is provided in the bibliography. Sources are repeated in the reference list, etc. - Most sources are listed in a haphazard order throughout the bibliography/reference list. - Few to no appropriate introductory phrases or rules of grammar have been applied, and many direct quotes and/or paraphrases feel disconnected from the flow of the text.
Feedback on referencing congruency:		
Overall feedback on referencing, with suggested improvements:		

Assessments: Assignment 1 and Assignment 2 — Background and Requirements

In this module, you will be expected to complete two (2) assignments and an unseen written examination. Ensure that you keep a soft copy of the completed assignments. Use your creativity and be as innovative as possible in the creation of the final solution. Use the marking guidelines/ marking rubrics provided for each activity to guide you through the minimum required content that you are required to submit for evaluation. This POE will require you to work consistently during the semester in order to achieve the best results.

Please read the hardware lab requirements and software lab requirements on page XIX in the prescribed material.

It is important to familiarise yourself with Cisco's Packet Tracer as well as to be able to work with activities and parts of the assessments.

Module Final Mark and Allocation of Marks

Description	Mark Allocation	Weight
Assignment 1	100 marks	25%
Assignment 2	100 marks	30%
ICE tasks		10%
Written Unseen Examination	100 marks	35%
TOTAL		100%

BACKGROUND

Computer networks and network fundamentals are critical components of modern industries, connecting businesses, offices, and factories to enable communication, data sharing, and productivity. In South Africa, industries such as finance, healthcare, education, and manufacturing rely heavily on computer networks to support their operations. However, as networks become more complex and interconnected, they also become more vulnerable to cybersecurity threats.

In South African industries where data is crucial, such as finance and healthcare, networks enable quick and secure access to sensitive information. Additionally, computer networks facilitate collaboration and communication between teams, regardless of their location. It has also played a vital role in supporting business operations and connecting employees to resources such as databases, applications, and files.

In South African industries, understanding network fundamentals is necessary to optimise network performance and reduce downtime. Proper network planning, design, and implementation can improve efficiency, increase productivity, and reduce network maintenance costs. However, as networks become more ubiquitous and interconnected, network security becomes a crucial concern. Cybercriminals are increasingly targeting computer networks to steal sensitive data or disrupt business operations. Cyberattacks can result in significant financial losses, reputational damage, and loss of customer trust. Therefore, implementing robust network security measures is critical to protect against data breaches and network attacks.

To enhance network security, industries should implement a multi-layered approach that includes both preventive and reactive measures. Preventive measures might include firewalls, intrusion detection systems, and two-factor authentication, while reactive measures might include data backup and disaster recovery plans. Educating employees on safe browsing habits, password management, and social engineering tactics can further enhance network security and minimise the risk of human error.

Computer networks have become an essential part of our lives, and their security is critical to protect against cyber-attacks. South Africa, like many other countries, faces cybersecurity threats, and it's important to understand computer network fundamentals and network security. By implementing proper security measures, organisations can protect their networks from unauthorised access, theft, damage, or misuse.

ASSIGNMENT SCENARIO

You have been appointed to plan and design a mega “**Library & Multimedia Technologies Center**” network project. The network is intended to be rolled out by the government department in various municipalities and locations.

For the purpose of testing and initiating the design and its implementation, the project will be limited to **two** (2) locations: one in your local city and the other in a different city. You are required to identify the names of the two cities for reference and naming specifications. In this scenario, the cities will be referred to as **City1** and **City2**. Assignment 1 is mainly focused on City1 networking requirements, installations, and design.

The network in each city will include the following three (3) departments:

1. The Library

- a. The library must allow the borrowing and returning of print copies and e-books via the library help desk assisted by Librarians (at least four (4) library help desks)
- b. The library must have sufficient printing, scanning, and copier devices. These devices are networked and operate via a server.
- c. The library must have 10 workstations that can be used for research (searching databases and surfing the Internet)
- d. The library must have two (2) workstations that can be used to search the availability of material from the library. These workstations must be restricted to only allow the library system to run on them.

2. 1 x Multimedia and Technologies Facility

- a. The multimedia must have one (1) presentation boardroom.
- b. The multimedia must have three (3) cinema rooms equipped at least with one network projector.

3. 1 x Connection Lab

- a. The lab will allow users to use the devices in the lab and/ or bring their own devices.
- b. Devices include electronic devices such as smartphones, tablets and laptops.
- c. The lab must be equipped with its own workstations (20 workstations)
- d. The lab must be configured and made ready for the connection of up to 20 electronic devices (for users who want to bring their own devices).

- e. The lab is divided into three sections (these may be rooms):
 - i. Onsite workstation section (as mentioned in **(3.c)** above).
 - ii. Bring-Your-Own-Device section [BYOD] (as mentioned in **(3.d)** above).
 - iii. Electronic Charging Spaces equipped with UPS and power stations allow the charging of devices of different kinds.

Mandatory: Server Room:

1. The center must be equipped with a secure server room. Security to access the server room must be hardened.
2. The center must also be equipped with (separate from a server room) an IT Support Office that can cater to at least three (3) IT/ Network Administrators to support the operations of the center.

Mandatory: Use and Centre Access – Entrance/ Exist

- Security must be hardened.
- Only registered members can access the Multimedia Facility
- Only registered members can access the Multimedia Facility
- The lending of any material is via a system for only active registered “in good standing” members.
- The center must be equipped with CCTV monitoring cameras in addition to assistance and security guards.

Assumptions:

- *You are required to identify and make use of your own/ preferred software and applications, where applicable.*
- *The scenario does prescribe floor plans of any departments, server rooms, and IT support offices. You will be required to plan and design your own floor plans and partition these according to the size of the library. The book section/ space must be indicated, although you are not required to show files and shelving. Your floor plans must show the network architecture required.*

ANSWER ALL QUESTIONS BASED ON THE SCENARIO GIVEN ABOVE. A MARK OF ZERO (0) WILL BE AWARDED IF THE SCENARIO IS NOT APPLIED OR IGNORED. OWN ASSUMPTIONS FOR THE NETWORK SOLUTION COMPLETENESS ARE WELCOMED.

Assignment 1 Activities**(Marks: 100)**

Design an **integrated network solution**. You are expected to make your own assumptions (which must be documented) regarding the details of the network specifications not provided in the scenario.

- Complete the activities:

Summary of Activities:

ACTIVITY	WEIGHING OF MARKS
Activity 1 – Network Topology, Model and Hardware (Learning Unit 1)	20 marks
Activity 2 – Network Addressing and Services (Learning Unit 3)	10 marks
Activity 3 – Network Cables and Cabling (Learning Unit 2)	20 marks
Activity 4 – Network Documentation (Learning Unit 2) Also relating to 1 and 3	30 marks
Activity 5 – Capstone Projects and Reflection Report (Learning Unit 1 – 3)	20 marks
TOTAL	100 marks

ACTIVITY 1**NETWORK TOPOLOGY, MODEL AND HARDWARE****(20)**

In this activity, you are required to use the prescribed material and search the internet to compile a list of the required information in the following questions.

1. Network Topology:

- Draw a table similar to the one below and complete it by providing the required information in columns A and B. Ensure that you list at least two (2) network topologies that can be considered for the network.

Table of <u>Network Topologies</u>	
Column A	Column B
List two types of network topologies.	Topology description, role, advantages and disadvantages
1.	
2.	

- b. Once completed (1.a.) above, based on the scenario, select a network topology that must be used for the network solution to meet the requirements of the scenario. For the topology listed, explain the role of the topology for the network solution to work.

Requirement		Mark Allocation
NETWORK TOPOLOGY		6
Table: Adequately compiled the table with all the information required.	2	
Selection: Adequately selected the network topology suitable for the network solution.	1	
Motivation: Adequately explained the role of the selected network topology referencing and meeting the requirements of the scenario. There must be clear and sufficient evidence in the explanation (motivation) that the topology selected is suitable for the network. <i>3 marks = Adequate motivation</i> <i>2 marks = Partially adequate motivation</i> <i>1 mark = Inadequate motivation</i>	3	
TOTAL		6

2. Network Model

Draw a table similar to the one below and complete it by providing the required information in columns A and B. Ensure that you list at least two (2) network models for consideration for the network.

Table of <u>Network Models</u>	
Column A	Column B
List two types of network models.	Model description, role, advantages and disadvantages
1.	
2.	

Once completed (1) above, based on the scenario, select a network model that must be used for the network solution to meet the requirements of the scenario. For the model listed, explain the role of the model suitable for the network solution.

NETWORK MODEL		4
Table: Adequately compiled the table with all the information required.	2	
Selection: Adequately selected the network model that the network solution will require for it to work.	1	
Role: Adequately explained the role of each selected model referencing and meeting the requirements of the scenario.	1	
TOTAL		4

3. Draw a table similar to the one below and complete it by providing the required information in columns A and B. Ensure that you list ALL the network hardware.

	Table of Network Hardware													
	Column A	Column B												
	List ALL types of network hardware.	Describe each network hardware, its role and functions												
	1.													
	2.													
	3.													
	4.													
	5.													
	Etc.													
	<table><tr><th colspan="2">NETWORK HARDWARE</th></tr><tr><td> - Table: Adequately compiled the table with all the information required. </td><td>5</td></tr><tr><td> - Role: Adequately described the role of each hardware type referencing and meeting the requirements of the scenario. The role and functions of each network hardware are mentioned in the description. </td><td>5</td></tr><tr><td colspan="2">TOTAL</td></tr></table>		NETWORK HARDWARE		Table: Adequately compiled the table with all the information required.	5	Role: Adequately described the role of each hardware type referencing and meeting the requirements of the scenario. The role and functions of each network hardware are mentioned in the description.	5	TOTAL		<table><tr><td>10</td></tr><tr><td>10</td></tr></table>	10	10	
NETWORK HARDWARE														
Table: Adequately compiled the table with all the information required.	5													
Role: Adequately described the role of each hardware type referencing and meeting the requirements of the scenario. The role and functions of each network hardware are mentioned in the description.	5													
TOTAL														
10														
10														
ACTIVITY 2	<u>NETWORK ADDRESSING AND SERVICES</u>		(10)											
	a. Using examples, describe four addressing methods that any network administrator or technician must be aware of. (2 marks) b. Using examples, explain the difference between IPv4 and IPv6 addresses. (4 marks) c. Explain how is classless addressing different from classful addressing and how this type of addressing relates to and is important to subnetting. (2 marks)													

- d. Discuss (not exceeding one page) namespace databases, name servers, and resource records as related to domain names and DNS. (2 marks)

NETWORK ADDRESSING		10
Addressing Methods: Adequately described four addressing methods. <i>2 marks = adequate description using examples.</i> <i>1 mark = inadequate description of the addressing methods.</i>	2	
IPv4 vs IPv6: Adequate explain what IPV4 address is. Adequate explain what IPV5 address is. Adequately used examples in the explanation above. The difference is adequately shown.	4	
Classful, Classless Addressing and Subnetting: Adequately explained how is classless addressing different from classful addressing and how this type of addressing relates to and is important to subnetting. <i>2 marks = adequate explanation using examples.</i> <i>1 mark = inadequate explanation.</i>	2	
Domain Names and DNS: Adequately discussed namespace databases, name servers, and resource records as related to domain names and DNS. <i>2 marks = adequate discussion.</i> <i>1 mark = inadequate discussion.</i>	2	
TOTAL		10

ACTIVITY 3	<u>NETWORK CABLES AND CABLING</u>	(20)
	Draw a table similar to the one below and complete it by providing the required information in columns A and B. Ensure that your list summarises the types of cables and connectors as well as the other categories in the table.	

Table of <u>Network Cables and Cabling</u>		
Column A	Column B	
Basic types of cabling standards.	Short Description	How can it be used in a network and ensure that the network functions efficiently?
1. Patch Cabling		
2. Horizontal Cabling		
3. Backbone Cabling		
		Total: 6 marks
List the types of cables and connectors.		
4. UTP		
5. STP		
6. Coaxial		
7. Fiber-optic		
		Total: 8 marks
8. Types of Connectors (up to two marks per column)*		
9. Media Converters		
10. Fiber Transceivers		
		Total: 8 marks
Cable management considerations (Any three).		
11.		
12.		
13.		
		Total: 6 marks

Other and Troubleshooting Tools.		
14. Ethernet standards (all standards for 2 marks per column) *		
15. Toner and Probe		
16. Multimeter		
17. Cable Continuity Tester		
18. Cable Performance Tester		
		Total: 12 marks
		Total: 40 marks
		Weighing of marks: $40 \div 2 = 20$

**Unless stated, award 1 for adequate content per column.*

ACTIVITY 4	<u>NETWORK DOCUMENTATION</u> Floor plan and Physical Network Diagram: Site1 Using an appropriate tool, such as MS Visio, Packet Tracer, etc., draw a comprehensive floor plan (physical network diagram) for the Site1 network solution. The floor plan (physical network diagram) must: - Fully labels and diagram legends indicated. - Include a narrative, explaining the detail of the diagram. - Include the following features or components: a) Internet connection b) Network Devices (including for wireless) c) Servers d) Nodes (endpoint devices) e) Cabling f) Wireless connections (Wi-Fi) g) Other (make appropriate or suitable assumptions)	(30)
-------------------	--	------

	<u>Recommended tools:</u> • Floor plans – MS Visio • Network Diagrams – Cisco Packet Tracer <u>Other resources:</u> The following resource helps unpack various concepts: Physical vs Logical Network Diagrams: https://www.youtube.com/watch?v=EF_U6yjtXk https://www.youtube.com/watch?v=16WSYHcLVGE Hyper-V Networking: https://www.youtube.com/watch?v=0yzkWo8Z-FA	
--	--	--

Requirement	Mark Allocation
FLOOR PLAN/ PHYSICAL NETWORK DIAGRAM (Site1) (BUILDING PARTITIONING)	
• An outstanding physical network diagram is provided for Site 1.	4
• An adequate physical network diagram is provided for Site 1.	3
• A partially adequate physical network diagram is provided for Site 1.	2
• An inadequate physical network diagram is provided for Site 1.	1
FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) ALLOCATION OF NETWORK DEVICES	
• An outstanding allocation of network devices is evidenced in the physical network diagram for Site 1.	4
• An adequate allocation of network devices is evidenced in the physical network diagram for Site 1.	3
• A partially adequate allocation of network devices is evidenced in the physical network diagram for Site 1.	2
• An inadequate allocation of network devices is evidenced in the physical network diagram for Site 1.	1

FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) ALLOCATION OF SERVERS AND ENDPOINT DEVICES			4
• An outstanding allocation of servers and endpoint devices is evidenced in the physical network diagram for Site 1.	4		
• An adequate allocation of servers and endpoint devices is evidenced in the physical network diagram for Site 1.	3		
• A partially adequate allocation of servers and endpoint devices is evidenced in the physical network diagram for Site 1.	2		
• An inadequate allocation of servers and endpoint devices is evidenced in the physical network diagram for Site 1.	1		
FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) LABELLING			4
• Outstanding labelling of the physical network diagram for Site 1 is evidenced.	4		
• Adequate labelling of the physical network diagram for Site 1 is evidenced.	3		
• Partially adequate labelling of the physical network diagram for Site 1 is evidenced.	2		
• An inadequate labelling of the physical network diagram for Site 1 is evidenced.	1		
FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) – CABLING			4
• An outstanding cabling strategy of the physical network diagram for Site 1 is evidenced. Labeling includes names of devices, cables/ access methods, and IP addresses used.	4		
• An adequate cabling strategy of the physical network diagram for Site 1 is evidenced. Labeling includes names of devices, cables/ access methods, and IP addresses used.	3		
• A partially adequate cabling strategy of the physical network diagram for Site 1 is evidenced. Labeling includes names of devices, cables/ access methods, and IP addresses used.	2		
• An inadequate cabling strategy of the physical network diagram for Site 1 is evidenced. Labeling includes names of devices, cables/ access methods, and IP addresses used.	1		

FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) – WIRELESS CONNECTIONS		4
• An outstanding allocation of wireless connections is evidenced in the physical network diagram for Site 1.	4	
• An adequate allocation of wireless connections is evidenced in the physical network diagram for Site 1.	3	
• A partially adequate allocation of wireless connections is evidenced in the physical network diagram for Site 1.	2	
• An inadequate allocation of wireless connections is evidenced in the physical network diagram for Site 1.	1	
FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) – ASSUMPTIONS		3
• Adequate assumptions are made and evidenced.	3	
• Partially adequate assumptions are made and evidenced.	2	
• Inadequate assumptions are made and evidenced.	1	
FLOOR PLAN / PHYSICAL NETWORK DIAGRAM (Site1) – BEST PRACTICES		3
• Best practices in drawing the physical network diagram are adequately applied.	3	
• Best practices in drawing the physical network diagram are partially adequately applied.	2	
• Best practices in drawing the physical network diagram are inadequately applied.	1	
TOTAL		30

ACTIVITY 5	<u>CAPSTONE PROJECTS AND REFLECTION REPORT</u>	(20)
Projects: - Complete Capstone Project 1 – 1 on page 43: Set up a Windows Virtual Machine using Hyper-V. - Complete project 2 – 3: Install and Use Nmap and Zenmap on page 92. - Complete Project 2 – 4: Install and Use Wireshark on page 96. - Complete Capstone Project 2 – 1: Set Up an Ubuntu Desktop VM on page 102. - Complete Capstone Project 2 – 2: Install and Use Packet Tracer on page 103.		

- f. Complete Capstone Project 5 – 1: Decode a TCP Segment in a Wireshark Capture on page 286.
- g. Complete Capstone Project 5 – 2: Build a Packet Tracer Network on page 289.
- h. Complete Capstone Project 3 – 2: Build a Mack Address on Packet Tracer.

TWORK ADDRESSING	Mark Allocation
Adequately completed (a) above. Adequate screenshots are provided as evidence that the project is completed.	4
Adequately completed (b) above. Adequate screenshots are provided as evidence that the project is completed.	3
Adequately completed (c) above. Adequate screenshots are provided as evidence that the project is completed.	3
Adequately completed (d) above. Adequate screenshots are provided as evidence that the project is completed.	4
Adequately completed (e) above. Adequate screenshots are provided as evidence that the project is completed.	4
Adequately completed (f) above. Adequate screenshots are provided as evidence that the project is completed.	4
Adequately completed (g) above. Adequate screenshots are provided as evidence that the project is completed.	4
Adequately completed (h) above. Adequate screenshots are provided as evidence that the project is completed.	4
TOTAL	30
WEIGHING OF MARKS	30 ÷ 2 = 15

<u>REFLECTION REPORT</u> Write a Reflective report (not more than one page in length) on your overall experience in completing this Assignment. Save the Report in PDF format. Draft your report in the following format or headings: A. Introduction ✓ Short description of the tasks (assignment) ✓ Short description of your own evaluation (how you planned to execute/complete the tasks? What were the challenges? What did you like most about the tasks? B. List of hard skills Learnt (and a very brief explanation (one sentence). C. List of soft skills learned (and a very brief explanation (one sentence). D. List of technologies and software used E. Conclusion.

Self-Reflection Report					
0-1 Does Not Meet Standard	2 Approaching standard	3 Meets standard	4 Above standard	5 Exceeds Standard: Excellent to Exceptional	Mark out of 5
A poor effort was made to reflect on the students' learning while completing the Assignment.	Minimal effort was made to reflect on the students' learning while completing the Assignment.	The report meets the standard, and a good effort was made to reflect on the students' learning while completing the Assignment.	The report is adequate and is above standard and an above average effort was made to reflect on the students learning.	The report exceeds the standard and the student articulately and an immaculate effort was made to reflect on the students' learning while completing the Assignment.	5

NB:

- Assignment 2 will continue to use the scenario provided in Assignment 1.
- Assignment 2 will expand on the knowledge and skills acquired in Assignment 1.
- Keep copies of all work submitted for Assignment 1. Assignment 2 may refer to the work that has already been completed in Assignment 1.

[TOTAL MARKS: 100]
